

Spring #6 2016

SoilBiotics Seed Treatment produces great emergence and increased plant size in 2016 corn crop

SoilBiotics products are making a big difference in potential yield with this corn crop in Sharon Springs, KS. Grower Jonathan Dansel sent us this side-by-side comparison photo of his just emerged corn crop. Seed on the LEFT was treated with a standard rate of **CRUISER®**. Seed on the RIGHT was treated with **CRUISER®** plus SoilBiotics **1 Seed Treatment**, a liquid Humic acid product.

In his own words, Jonathan said "I would have bet a million bucks you wouldn't see any visual difference on corn with the ST but you damn sure can."

Field Signs Now Available

SoilBiotics field signs are now available upon request by emailing corey@soilbitotics.com or calling the office (815) 365-2353.
