SoilBiotics organic program results in fantastic 2020 Alfalfa crop for Eastern Ohio grower!

A SoilBiotics organic program along with recommended seeding changes helped an Eastern Ohio grower with his 2020 alfalfa crop, resulting in the phenomenal pictures you see here. Per SoilBiotics recommendation, the grower increased his seeding rate for both yield and weed control. The field is lush and full, looking better than any conventional field in the area. At the time these photos were taken they had not had any rain for 40 days, yet the yields are fantastic, and the quality is outstanding for dairy cows in this region. The grower plans on planting an 70-100 acres next year. He notes that he makes 2x more revenue on selling hay to dairies than he does raising corn, and his customers tell him that his hay puts more milk in the tank.
