

# THE DIRT!

SOILBIOTICS COMPANY E-NEWSLETTER

NOVEMBER 2019

## Get Better Fall Weed Control and Digest Residues at the Same Time

A late harvest season and untimely rains mean that fall herbicide applications to keep up with weed pressure and control winter annuals have gotten pushed back. Talk to SoilBiotics about adding [Growth Supplement 30](#) to your spray program to enhance herbicide performance by increasing absorption of active ingredients. Adding [SB5500](#) to the program with some nitrogen will help digest exposed weed seeds, plus accelerate crop residue breakdown via microbes that specialize in decomposition. [Growth Supplement 30](#) will then support the microbial activity of the [SB5500](#) by acting as another food source. Better weed control and residue digestion are accomplished in the same pass across the field.

## Build Your Soil in Time for The Next Crop

Rebuild your soil structure now for better results next year! Fall is the time to apply [Organic 2r - Soil Boost](#) for both conventional and organic fields. This product contains a high Humic acid content and helps build your soil. Soil becomes looser, aiding in water retention through deeper penetration. This also alleviates soil packing and cracking, reducing surface runoff and erosion. Plus, [Organic 2r - Soil Boost](#) helps improve soil pH by neutralizing and buffering acid and alkaline soils. And it enhances uptake of nutrients by your newly planted crops!

## SoilBiotics Organic 1r - Seed Treatment

In multi-state seed trials conducted by a major seed company, SoilBiotics [Organic 1r - Seed Treatment](#) has been shown to be a top performer when tested against a variety of both organic and conventional competitors. This is an easy to use stand-alone seed treatment that is compatible with most other organic seed treatments. [Organic 1r - Seed Treatment](#) may be applied up to 5 months prior to use. It is formulated to improve the early stages of plant life, reducing insect and disease pressure for better plant health and improved yields.

Ask your SoilBiotics representative about **Seed Start 200**, a new seed treatment that contains a unique combination of Humic Acid (10.5%) along with a consortium of living breathing micro-organisms designed to boost plant and soil microbial activity.

## Holiday Note

We are thankful for another fruitful year and for having all of you as our customers. We send holiday greetings to you and yours, and say a prayer for safe travels and warm family time together.

The SoilBiotics offices will close at noon on **Wednesday, November 27** and be closed **Thursday and Friday, November 28 and 29**.
