## Time for Soil Testing

**Now that the crops are out of the fields it's time for soil testing. Even though prices for macronutrients have recovered from frightening levels, it's always a good idea to find out what nutrients you need to replenish before planting next spring.** The SoilBiotics Soil Testing Program provides a soil analysis that aids in determining pre-plant and side-dress fertilization requirements. It was created by GMS Labs and SoilBiotics with specific criteria to provide an understanding of the crop production capabilities of each field in terms of salinity, soil type, water holding capacity, percolation, and much more!
