## SoilBiotics program produces better

### 2015 Romaine Lettuce crop

SoilBiotics' products are making a big difference in yield with markedly better results in this California Romaine Lettuce crop. Larger and darker green leaves, plus a substantially larger root ball are indicated (as shown on the right of image A), increasing overall yield. Image B shows the control plants' smaller, less full root ball on the left. The SoilBiotics treated plants are on the right, and show a larger, more filled out root ball.

A

B

The SoilBiotics program consisted of the following products & amounts, delivered through a drip irrigation system:

- 14 pounds per acre of organic Nitrogen
- 1 gallon per acre of **Organic 3r - Growth Boost**
- 1 gallon per acre of **CAL-10**
