

# RESEARCH FOR RESULTS

## SoilBiotics products produce outstanding results in 2016 California Tomato crop

A comprehensive program of SoilBiotics products resulted in markedly better plant size and flower set in this 2016 California Tomato crop. This Colinga, CA (San Joaquin Valley) grower utilized a **per/acre** combination of 1 Gallon **3 - Growth Boost** and 1 pint **SB4400**, applied with 5 gallons of 32% N.

Plants shown after transplant.

Plants in CENTER row treated with SoilBiotics program of 1 gallon/A of 3 - Growth Boost and 1pt of SB4400 in 100 gallons of water, sitting for 24 hours in a tray and then transplanted the next day.

**Note that there is no visible transplant shock.**

The SoilBiotics program was 5 gl/A of 32% N, 1 gallon/A of 3 - Growth Boost, and 1 pint/A of SB4400 every 7 days through the drip system.

The Control program was drip application of 32% N.

Plants treated with SoilBiotics program (CENTER) show significant growth over control plants (RIGHT & LEFT), plus impressive flower set; **+30%** over the control.
